

It's More Than Just A Coating... It's Protection!

Aleris now offers the added protection of antimicrobial coatings. All of our coatings can be formulated with antimicrobial additives, designed to inhibit the growth of undesirable microbes such as bacteria, mold, yeast, fungi and mildew.

Studies have shown that when these microbes come in contact with the product surface, the antimicrobial protection penetrates the cell wall of the microorganism and disrupts the cell's ability to function, grow and reproduce. Antimicrobial protection is built-in during the manufacturing process and, depending on the end use, will last the useful life of the coating without any adverse effects to the performance of the painted surface.

For over 40 years, Aleris Rolled Products has been an innovator in developing a broad spectrum of coating options with unmatched color expertise and versatility. If you believe your products may benefit from the addition of antimicrobial protection, contact Aleris today and let us show you the value of our experience.
