A wide variety of colors are available at hardware stores throughout the country.

Drying Time

77° F @ 50% Relative Humidity
The Touch: 1 hour
To Re-coat: 4 hours

Flammability

Flash point is above 200° F

Surface Coverage

300 - 400sq. ft./gal. (27.9 - 37.2m²)
Depending on surface porosity.
At: 4 mil Wet, 1.6 mil Dry

PREPARE SURFACE CAREFULLY

Previously Coated Surface

- Clean and dry surface thoroughly, removing all dirt, dust, chalk, rust, grease wax and mildew. Scrape off loose and peeling paint, sand smooth. Thoroughly remove chalk by vigorous washing, then rinse. Dull glossy surfaces with gloss remover or sandpaper. Wash thoroughly and allow to dry.
- Then paint with a color lighter than original siding color. PLEASE NOTE: Painting with darker colors will cause warping or deformation from heat absorption. Always check for compatibility of the previously painted surface with the new coating by applying a test area of 2-3 feet.
- Recognize that any surface preparation short of total removal of the old coatings may compromise the service length of the system
